

ERRORX

IT SOLUTION COMPANY

We Provide All kind of IT Solution.
From Mobile App to Web Development.
AI & Machine Learning Company

Date: 10-07-2025

To Whom It May Concern,

Subject: Project Experience Letter for University Admission – **Mr. Jeyansh Gandhi**

Joining Date: 6th January, 2025

End Date: 5th July, 2025

Technology: Appointed in ML & AI Based Development.

I am pleased to write this letter in support of **Mr. Jeyansh Gandhi** for his admission to your esteemed university. During his tenure at **ERRORX**, **Jeyansh** played a crucial role in the development of an innovative web application titled “**Employee Facial Attendance System.**”

This project was developed using **Flask (Python)** for the **web backend** and **MongoDB** for the database, with real-time face detection and recognition powered by OpenCV. **The system was designed to modernize and secure the employee attendance process by replacing traditional methods with an AI-driven facial recognition solution.**

Project Highlights:

Admin Login (Facial Recognition):

The HR/Admin can log in using facial recognition, eliminating the need for passwords and enhancing security by ensuring only authorized personnel can access the system.

Dashboard with Live CCTV Feed:

The dashboard provides real-time camera footage from the office entrance and displays the top 10 employees with the highest attendance rates.

Employee Registration:

The system supports the registration of new employees, including personal details, document uploads (resume and certificates), and face capture for recognition. Facial data is securely encrypted before storage.

Employee Directory:

Address: 201-A Central Bazaar, Navsari-Gandevi Road, Opposite Vidyakunj School, Navsari-396445

Mobile: +91 93287 35292 **Email:** wekey@errorx.in | errorx.info@gmail.com

Our Website: www.errorx.in

HR can view a searchable list of all registered employees along with their profile and attendance history.

Project Tracking Modules:

Completed Projects: Includes project details like name, type, duration, budget, and client/company.

Ongoing Projects: Tracks active projects, timelines, and relevant data.

Excel Export Functionality:

HR personnel can download attendance records in Excel format for weekly, monthly, or yearly reporting with a single click.

Secure and Scalable Backend:

All application data—including **encrypted facial data, employee profiles, attendance logs, and project information**—is managed using MongoDB, ensuring both scalability and robust data security.

Throughout the development lifecycle, **Mr. Jeyansh Gandhi** demonstrated a strong grasp of full-stack development, AI integration, database design, and cybersecurity practices. He was proactive in problem-solving and contributed significantly to the project's success, particularly in integrating OpenCV and ensuring data protection through encryption.

This project reflects **Mr. Jeyansh Gandhi's** technical acumen, attention to detail, and ability to work independently and collaboratively. I am confident that he will bring the same level of innovation and commitment to your academic program.

Please feel free to contact us for any further information.

Sincerely,

Authorized Signatory,

Vivek Patel (Founder & CEO)
